Comodo is Creating Trust Online® because none of us can realize the full potential of the Internet unless it's a trusted place to interact and conduct business.

Year Established: 1998

Ownership: Private

Employees: over 600

Today, the Comodo family of companies is Creating Trust Online® in over 100 countries with:

- Over 25 million installations of Comodo PC security software
- Tens of millions of Internet users interacting and conducting business with the websites, email and other Internet applications that Comodo secures and authenticates
- Over 200,000 business customers and e-merchants
- Over seven thousand partners and affiliates working with Comodo to make the Internet more secure and trusted.

Our dependence on computers and the Internet grows with each passing day, and so, too, does our vulnerability. Daily news reports confirm a clear and present danger confronting all Internet users from ever-growing and evolving malware (a collective term to describe viruses, Trojans, worms, etc.), cyber-crime, cyber-terrorism and related threats. These threats, primarily the work of highly-sophisticated organized crime groups, directly harm millions of Internet users each day and are eroding our trust in the Internet. Every individual or business using the Internet has a role in restoring this trust.

Comodo's team of over 600 people has a passion for meeting these challenges head-on -- Creating Trust Online® for individuals, e-merchants, small to medium businesses and large enterprises. Comodo's innovative software and services do this by:

- **Authenticating Individuals, Businesses Websites and Content:** Authentication is at the heart of trust – it's the process of confirming that something or someone is genuine. Hackers are counterfeiters and impersonators - they thrive on deception. Trust is created when individuals, businesses, websites or software publishers are authenticated to ensure that they are who they say they are, and that their information has not been tampered with. This trust is the core of successful online businesses and trusted online interactions.
- **Securing Information:** Encrypting sensitive information at all stages of its lifecycle is a proven method of keeping it safe from hackers. Strong Public Key Infrastructure (PKI) encryption through digital certificates ensures that the encrypted information can only be used by authorized parties.
- **Securing Websites and E-Commerce:** Uncovering and alerting IT organizations to vulnerabilities in their server/site's technical configuration or security procedures that could be exploited by hackers, and providing advice or solutions to eliminate them.
- **Securing and Maintaining PCs:** Denying hackers access to the information and resources they need to succeed, such as your personal or business financial information, and at a more fundamental level, your computer's internet connection and processing capacity.

SSL CERTIFICATES

Comodo is the largest single-brand certificate authority in the world.

A Comodo SSL Certificate is the quickest and most cost effective way for an online business to protect customer transactions. Each certificate comes with a great value-add package, which makes them perfect for small to medium sized businesses. Larger enterprises receive the industry's broadest array of PKI digital certificates covering a range of types and terms, fully-featured certificate management solutions, more browser recognition than all of our competitors, and the most attractive pricing.

You have the assurance that as a WebTrust certified Certification Authority we meet the highest standards of confidentiality, system reliability and pertinent business practices as judged through qualified independent audits.

COMODO

CERTIFICATE MANAGER

Eliminate manual spreadsheets, discover and manage existing internal and external certificates, automate digital certificate lifecycle management, and reduce security risks with the most advanced outsourced PKI solution. Comodo Certificate Manager was developed with numerous Fortune 500 companies to efficiently and securely manage large volumes of digital certificates. CCM is now available for organizations of all sizes and certificate volumes.

» enterprise.comodo.com

Product Features

- **Certificate Lifecycle Administration.** Extensive portfolio of SSL, S/MIME and Client Authentication certificates that allows for the rapid enrollment, approval, issuance, revocation and renewal of all certificates.
- **Internal and External Discovery Scanning.** Administrators can track certificates purchased from different vendors, including all details of each certificate.
- **Secure, Multi-Tiered Administrative Web Interface.** Flexible organizational alignment of administrative domains that easily adjusts to your business model.
- **Configurable Email Notifications.** Allows the administrator to be notified about requests, approvals, expirations or revocations or to enable certificate owners and administrators to receive expiration notices in advance.
- **Same-Day Expirations.** Administrators control the term and expiration (day/month/year) of all issued certificates.
- **Report Subsystem.** Produce detailed certificate and administrative status and activity logs.
- **Client Key Management Services.** Escrow and recovery of private keys enable a protected (policy-driven) restoration of user encrypted data. AD/LDAP Integration available.

COMODO CERTIFICATE MANAGER DASHBOARD

The CCM Dashboard will be displayed by default when an administrator first logs into the CCM interface.

The dashboard provides a heads-up-display which allows the administrator to quickly gain an overview of all SSL, SMIME and code-signing certificates on the network.

The charts and graphs in the dashboard provide administrators with an essential combination of key life-cycle information (such as certificates approaching expiry, certificates issued/requested and Domain Control Validation (DCV)) as well as important technical insights like how many of the servers in the network have support for perfect forward secrecy, renegotiation and RC4 suites.

The chart data is updated in real-time, so any modifications you make should be reflected in the dashboard near-instantly.

PCI COMPLIANCE WITH HACKERGUARDIAN

HackerGuardian is a fully configurable vulnerability assessment and reporting service for networks and web servers. Our remote audits run over 60,000 individual security tests on an organization's servers and provide an executive report on those vulnerabilities.

Because Comodo is PCI Security Council Approved Scanning Vendor (ASV), our 'HackerGuardian PCI Control Center' range provides everything a merchant needs to become compliant with the PCI Council Data Security Standards (DSS) vulnerability scanning guidelines.

HACKERGUARDIAN FEATURES & BENEFITS

Features	Standard	Enterprise
SAQ / Attestation of Compliance	✓	✓
On Demand Scanning	✓	✓
Schedule Scan Facility	✓	✓
Port Scan Audit Reports	✓	✓
Vulnerability Mitigation	✓	✓
PCI Scan Report	✓	✓
Executive Summary Reports	✓	✓
Max # of IP's	5	20
Max Scans Per Quarter	10	unlimited
Starting From Price	\$249.00 / year	\$399.00 / year

PRODUCT BENEFITS

- Cost effective and fast way of meeting the PCI scanning guidelines helps merchants save time and money.
- Identifying and fixing any security vulnerabilities reduces risks for acquiring banks.
- Official 'PCI Compliant' report after every successful scan simplifies reporting processes.
- Our SAQ provides an Attestation of Compliance (AOC) in an easy-to-use online application.

ACQUIRER PCI CONTROL CENTER (PORTAL)

**Comodo
HackerGuardian™**
Painless PCI™ Compliance

The goal of this product is to provide our partners with automated and up-to-date compliance information on their merchants. Whatever we know, our partners know in an instant. Partners receive automatic updates on their merchant's compliance status which is also easily exportable into reports that are either customized or per payment brand templates.

PCI DASHBOARD & SAQ ANALYSIS

Partners have access to merchant ASV scan results, latest SAQ status, & overall compliance status via an easy to use PCI management portal/dashboard. Analyze your merchants SAQ completion rates by type and compare against your peers to see where you stand.

MARKETING RESOURCES

When Comodo works with our partners on marketing and sales campaigns, we provide those resources within the portal. Comodo marketing resources such as landing pages, email templates, logos and banners allow partners to perform their own campaigns.

SEARCH AND FILTER BY COMPLIANCE STATUS

Quickly access a table of your merchant's SAQ status, ASV vulnerability scan status, overall compliance status and other information with easy-to-use filters. You can also download their SAQs and scan reports directly from within your portal. Our search bar allows you to find any merchant's compliance status in one click.

Merchants Compliance Status

Level ▼ SAQ Status ▼ Scan Status ▼ Compliance Status ▼ From Date ▼ To Date ▼

ID	NAME	STATUS	LEVEL	SAQ RECEIVED	SAQ TYPE	SAQ STATUS	SCAN STATUS	SCAN DATE	COMPLIANCE STATUS	NEXT COMPLIANCE VALIDATION DATE

Security Doesn't Have to Hurt.

HACKERPROOF

DAILY VULNERABILITY SCAN & TRUSTMARK

Behind HackerProof is a powerful daily scanning engine that ensures HackerProof websites meet Comodo's standards. HackerProof also provides a trustmark that is displayed on a website to build trust and confidence with users. Many studies have shown how a visual indicator that reminds visitors of their security helps improve sales conversion. The interactive trustmark provides up to date scanning information to visitors for added assurance.

» comodo.com/hackerproof

PRODUCT BENEFITS

- Reduce shopping cart abandonment and increase sales.
- Ensure consistent placement of the HackerProof Trustmark throughout your website.
- Enjoy our exclusive Point to Verify technology and invite more interaction to build trust for your website.
- Protect customers or users from phishing attacks to stay ahead of today's threats.
- Automate a daily scan on your HackerProof domain so you can save time - set it and forget it.
